Water System Management/Operation
Wastewater System Management/Operation
Backflow Prevention Assembly Testing
Cross Connection Control Inspection
Consulting

Water Systems Management, Incorporated (WSM) has been contracted by Bottle Bay Recreational Water and Sewer District (BBRWSD) to manage day-to-day operations of their wastewater collection, treatment, and land application (re-use) systems. Additionally, WSM works with regulatory agencies to assure general compliance with all local, state, and federal rules and regulations, provides consulting services and interface with District engineers.

WSM is a small management company primarily providing Idaho State licensed operators, providing consulting services and managing compliance activities associated with public drinking water systems, wastewater systems, cross connection control inspections, and backflow prevention assembly testing.

General services may be limited to substitute-responsible-charge operation all the way up to complete system operation including billing, accounts receivable, accounts payable, regulatory correspondence, and other items that may be required during routine business management activities.

Approved water/wastewater testing equipment, locating equipment, and automatic meter reading equipment is owned by the company. All equipment is calibrated as required and operated by trained operators.

Although relatively small, WSM has contracted with privately owned systems, associations, districts, cities, the State of Idaho, and the Federal government to provide operation of water and wastewater systems and to provide locate services, backflow prevention assembly testing and consulting services.

For additional information please feel free to contact our office at any time.
